Oct 29/20

My dear Gray

Many thanks for the  
Clematidina flower which was  
quite satisfactory and shows that  
after all Clematidina is rightly  
placed in Bruncea where as in  
Ctenostemon the general character overrids  
the general one of the 1. or 2. called ovules  
ovary cells - but Bruncea to me is clearly  
a tribe of Euphorbiaceae (not a distinct

Order  
The Kober's are just returned  
from Paris where they have been  
for the last weeks ceremonies

Yours very sincerely  
George Bentham
